DETAILED ACTION

Election/Restrictions

1. This application is in condition for allowance except for the presence of claims 22-48 directed to an invention non-elected without traverse. Accordingly, claims 22-48 have been cancelled.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Merle W. Richman, III (Reg. No. 38,282) on September 3, 2009.

The application has been amended as follows:

IN THE CLAIMS:

Claim 49 should read:

49. A method of performing an endoluminal procedure on a luminal body organ, the luminal body organ including a wall with an innermost tissue layer adjacent to the organ lumen, the innermost tissue layer including folds, comprising:

a) manipulating the ~~innermost tissue layer folds at or near at least two tissue regions along the organ wall~~ to reduce one of the size and number of folds of the

innermost tissue layer at or near the at least two tissue regions so the innermost tissue layer is substantially flat at or near the at least two tissue regions;

- b) engaging the at least two tissue regions along the organ wall after manipulating the innermost tissue layer folds at or near the at least two tissue regions; and
- c) securing the engaged at least two tissue regions together.

Claim 58 should read:

58. A method of endoluminally creating a partition in a luminal body organ, the luminal body organ including a wall with an innermost tissue layer adjacent to the organ lumen, the innermost tissue layer including folds, comprising:

- a) ~~manipulating the innermost tissue layer folds at or near a first and a second tissue region along the organ wall~~ to reduce one of the size and number of folds of the innermost tissue layer at or near a first and a second tissue region so the innermost tissue layer is substantially flat at or near the first and second tissue regions;
- b) employing a tissue engagement mechanism to engage the first and second tissue regions along the organ wall after manipulating the innermost tissue layer folds at or near the at least two tissue regions; and
- c) securing the engaged first tissue region to the engaged second tissue region to form a partition within the luminal body organ.

Claim 65 should read:

65. A method of creating a gastric partition, comprising:

- a) moving a partition-forming means past an esophagus and into a stomach;

- b) manipulating stomach folds at or near a first and a second tissue region along the stomach wall to reduce one of the size and number of stomach folds so the folds are substantially flat at or near the first and second tissue regions;
- c) employing a tissue engagement mechanism to engage the first and second tissue regions along the stomach wall after manipulating stomach folds at or near the first and second tissue region, the tissue engagement means one of linked to and integrated with the partition-forming means;
- d) drawing the engaged first tissue region and the engaged second tissue region one of within or near the partition-forming means; and
- e) employing the partition-forming means to deploy at least one tissue securement element through the drawn first tissue region and the drawn second tissue region to form a gastric partition within the stomach.

Allowable Subject Matter

- 3. Claims 49-69 as presented June 22, 2009 and as amended by the examiner as noted above are allowed over the prior art of record.
- 4. The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to teach or disclose, either singly or in combination, the claimed method comprising manipulating the folds of the innermost tissue layer of a luminal organ, notably the stomach, such that they are substantially flat at or near two regions, engaging the two regions after

manipulating the innermost tissue layer, and securing the engaged tissue regions together.

5. The closest prior art of record is Deem et al (USPGPub 2003/0109892 A1) and Gannoe et al (USPGPub 2004/0006351 A1). However, these references do not disclose the invention as claimed or described above.

6. Regarding independent claims 49, 58, and 65, both Deem et al and Gannoe et al fail to teach among all the limitations or render obvious the method of manipulating the innermost layer of the stomach to reduce the size or number of folds to substantially flatten the surface at or near two tissue regions prior to engaging the two tissue regions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
